Dear Crash Data Researchers/Users:

Thank you for choosing crash data from the National Highway Traffic Safety Administration (NHTSA) for your research or other use. The information contained in this motor vehicle crash report is collected, maintained and distributed in accordance with Public Law 89-564. In accordance with this Public Law, NHTSA is required not to release any case information until completion of quality control procedures. These procedures include a review of the case material to extract all names, licenses and registration numbers, non-coded interview material, non-research related researcher comments in the margins, non-factual data, and the production number portion of the vehicle identification number (VIN).

If you requested NHTSA to query its database files in order to identify a specific crash, then that query was made using non-personal descriptors you provided for use in our search. This motor vehicle crash may have been identified from a data search and matches the general, non-personal descriptors you provided, but we cannot confirm that this is the specific crash report you requested.

If you have any questions with regard to the above procedures, please contact the Field Operations Branch, Crash Investigation Division, National Center for Statistics and Analysis at 202-366-4820. Again, please be advised that we cannot confirm that this is the case that you have specifically requested nor can we certify the information to be correct.

AUTO SAFETY HOTLINE  
(800) 424-9393  
Wash. D.C. Area 366-0123

Case Vehicle (A): 1999 Volkswagen  
Type: Jetta, 4-door sedan  
Driver: 32-year-old male  
CDC: 06-BDEW-7, 01-FDEW-3

Vehicle (B): 1998 Dodge  
Type: Ram 1500, 4x4 pickup  
Driver: 27-year-old female  
CDC: 99-0000-0

Vehicle (C): 2001 Dodge  
Type: Dakota, 4x4 pickup  
Driver: 35-year-old female  
CDC: 99-0000-0

## SITUATION

(Slide 1) Case vehicle (A) was traveling north in the northbound lane of a straight section of a dry, asphalt, two-lane roadway, (slide 2) with a speed limit of 48 kph (30 mph). Vehicle (B) was traveling south in the southbound lane of the same roadway. Vehicle (C) was traveling north in the same northbound lane, behind case vehicle (A). Vehicle (C) struck the rear of case vehicle (A) and caused case vehicle (A) to veer sharply to the left, cross the centerline, and enter the path of vehicle (B). The driver of case vehicle (A) reportedly attempted to avoid a collision with vehicle (B) by veering to the right and braking, but case vehicle (A) struck the front of vehicle (B) with its front.

## GENERAL VEHICLE DAMAGE AND ESTIMATED CRASH SEVERITIES

(Slide 3) Damage to case vehicle (A) was severe. The direct-damage length for the rear impact was 151 cm and extended across the entire rear of the vehicle. The maximum crush was 91 cm and occurred 28-cm inboard from the left-front bumper corner. The direct-damage length for the frontal impact was 152 cm, and extended across the entire front of the vehicle. The maximum crush was 45 cm and occurred 56-cm inboard from the left-front bumper corner. The left wheelbase was reduced 16 cm, and the right wheelbase was reduced 8 cm.

Using the WinSMASH accident-reconstruction program and (slides 4, 5, 6, 7, 8) c-values for case vehicle (A), the following impact severities were calculated:

Vehicle	Variable	Calculated Velocity Change - kph (mph)		
		Total	Longitudinal	Latitudinal
Case Vehicle (A) rear impact	EBS	56 (35)	56 (35)	0 (0)
Case Vehicle (A) front impact	EBS	35 (22)	-33 (-21)	-12 (-8)

## DESCRIPTION OF DAMAGE TO CASE VEHICLE (A)

### Exterior

(Slides 9, 10, 11, 12, 13, 14, 15) The front bumper, both headlight assemblies, the grille, and the radiator were severely crushed from the impact with vehicle (B). (Slide 16) The hood was crushed and elevated and contacted the windshield, but did not penetrate it. (Slides 17, 18) The hood latch was damaged and released. Both hood hinges were damaged. The windshield was cracked by the stress of impact forces. The right fender was buckled and the left fender was severely buckled. Both front doors remained closed and operational. Both rear doors were jammed shut. All of the wheel struts were damaged. Both quarter-panels were severely buckled. The roof was buckled and the left upper A-pillar was deformed, as a result of the deformation of both of the C-pillars and both rear roof siderails. The back bumper, both taillight assemblies and the trunk lid were severely crushed from the rear impact by vehicle (C).

### Interior

(Slides 19, 20, 21, 22, 23, 24) This vehicle was equipped with both steering-wheel and passenger frontal-impact airbags, and both deployed during the frontal impact. No damage was noted to the airbag skins or (slides 25, 26, 27, 28) to the module doors/flaps. (Slide 29) No occupant contact marks were noted to the airbag module doors/flaps. (Slide 30) The upper half of the steering-wheel rim was deflected slightly forward and there was slight deformation of the steering-wheel spokes. There was minor rotation of the steering column to the right. The driver seatback recliner mechanism did not hold. (Slides 31, 32) The left rear door, the door hardware, the armrest, the left-rear glass, the left B-pillar, both rear roof siderails and the back-light header were deformed. The shelf below the back-light and the rear seatback were damaged by intrusion. (Slides 33, 34, 35, 36, 37) No contact points were noted on the left-roof siderail, the left upper A-pillar, or the left-front door interior panel. No damage was noted to the upper and mid instrument panels. The following intrusions were noted and measured.

Location	Component	Distance (cm)	Direction
left rear	seatback	40	forward
center rear	seatback	34	forward
right rear	seatback	28	forward

## OCCUPANT INJURIES AND KINEMATICS

The 5-ft, 11-in, 185-lb, 32-year-old male driver (slide 38, 39) was wearing the available three-point belt, as indicated by a webbing imprint on the plastic continuous loop of the seatbelt tongue assembly, and (slide 40) the steering-wheel airbag deployed. During the initial rear impact, he moved rearward into the seatback. (Slides 41, 42) During the frontal impact, he moved forward and slightly to the right into the shoulder belt and the airbag. He sustained a Grade-I laceration of the spleen, possibly from contact with the door. He sustained a contusion to his left hip, probably from loading by the lap belt, but possibly from contact with the door interior. (Slides 43, 44) He sustained an abrasion to the right shin, probably from contact with the knee bolster. He also sustained a fracture of the right distal 5<sup>th</sup> phalanx, possibly from hand contact with the instrument panel, although no contact point was noted that could be associated with this injury.

The following table and (slide 45) attached drawing summarize the injuries sustained by the driver.

Occupant: Driver  
Restraints: 3-point belt worn; airbag deployed

Age: 32 years  
Stature: 180 cm (5 ft, 11 in)

Gender: Male  
Mass: 84 kg (185 lb)

## CODES FOR COLUMN B, OCCUPANT SPACE NUMBER

OCCUPANT SPACE NUMBER IS A TWO-DIGIT CODE. THE USE OF THE CODE IS DETERMINED BY THE VEHICLE SEAT CONFIGURATION AT THE TIME OF THE ACCIDENT.

## FIRST DIGIT

THE FIRST DIGIT (LEFT DIGIT) DENOTES THE SEAT ROW, WITH CODE VALUES FROM 1 TO 5.

## SECOND DIGIT

THE SECOND DIGIT (RIGHT DIGIT) DENOTES THE POSITION ON THE SEAT AND, IN SOME INSTANCES, THE WIDTH OF THE SEAT.
